Kesting Ventures® Corp. will promptly respond to requests for information and requests for proposals.

Growing an Existing Business:

Level 3 of the Market Value System identifies product properties, technologies and sales/marketing programs to enable an existing business to increase its market share and profitability. Level 3 might also prepare a business blueprint for the growth of an existing business.

Creating "New-to-Company" Businesses:

Level 3 of the Market Value System identifies product properties, technologies and sales/marketing programs to enable a company to enter a "new-to-company" market as a Market Value Leader. Level 3 might also prepare a business blueprint for the establishment and growth of a "new-to-company" business.

Competitive Intelligence:

Level 3 of the Market Value System enables a company to decipher and evaluate competitors' product, manufacturing and marketing strategies.

Acquisitions and Mergers:

Level 3 of the Market Value System enables a company to develop business blueprints that enable acquisitions and mergers to achieve Market Value Leadership.

Market Value System Programs: KVC has a number of MVS Programs that use various levels of TMP Value, Economic Value and Influence to evaluate technology alternatives and/or players in specific markets.

ISUM Competitive Intelligence Programs: ISUM is a managerial accounting and engineering system that is capable of modeling manufacturing processes so thoroughly that plant managers and engineers can use the models to optimize their own plants. KVC has a number of ISUM Programs that address various competitive intelligence needs.

Extend® Programs are for existing business teams, who want to accelerate the growth and improve the profitability of their business. An Extend Program does everything that is required to develop a knowledge-based business blueprint for growth that has the business team's full commitment.

Start® Programs are for Companies who want to identify, develop and launch a "new-to-the-company" business. The "new-to-the-company" business must utilize the company's assets, skill sets, competencies, information and Knowledge Blocks but must not conflict

The Market Value System

Market Value is the metric that correlates with market share and profitability in a market value chain. The Market Value System creates all of the Knowledge Blocks required for a company to position itself as the Market Value Leader of a specific market.

$MV = \text{Properties} + \text{Economics} + \text{Influence}$

$\text{Properties} = \text{TechnoMarket Performance Value}$

$\text{Economics} = \text{Economic Value}$

$\text{Influence} = \text{Marketing Influence}$

TechnoMarket Performance (TMP) Value

TechnoMarket combines technology and market performance.

TMP Value is a Knowledge Block that links all of a product's properties together and correlates them with functional value for the product's use in a specific application. TMP Value is the product. This is what the customer purchases and not the specific widget that embodies the properties.

TMP Value enables competitive products to be compared in great detail and matched with optimum property profiles that meet the long term needs of specific markets.

Economic Value is a Knowledge Block that includes everything required to support a product cost-to-market goal ratio. These ratios are very important because they can enable a business to match price with Market Value to ensure that the business controls its own profitability.

Influence is a Knowledge Block that describes the marketing hurdle that every player in a Market Value chain must overcome. Influence is like a brick wall in front of a customer that must be scaled before a supplier can do business with that customer. Most players can overcome the Influence hurdle sufficiently to be able to conduct business in a Market Value chain. But Market Leaders generally know how to gain an Influence advantage over their competitors.

Knowledge Blocks contain:

- Sorted and structured background information
- Glossaries that contain complete definitions of all variables (performance, economics, influence)
- Multi-sheet Excel files that are capable of analyzing all variables. TechnoMarket Performance (TMP) files typically contain 70 or more variables. ISUM cost models typically contain more than 1,000 data points.
- Workbooks that explain how to populate the multi-sheet Excel files.
- Use instructions to teach how the Excel files can be used to solve complex technology, market and business puzzles.
- Experiential modeling sessions with expert panels that typically have >200 years combined professional experience.

Level 3 of the Market Value System creates all of the Knowledge Blocks required to achieve Market Value leadership of an Existing or "new-to-company" business.

Market Value System Level 3 Benefits

Level 3 of the Market Value System creates all of the Knowledge Blocks required to position a company as a Market Value leader in a specific market.

Level 3 of the Market Value System prepares a business blueprint that spells out all of the tactical action plans required to achieve Market Value Leadership plus the financial statements and other documents required to secure financing for the business.

All of the Knowledge Blocks that are created in Level 3 of the Market Value System are tangible assets that add to the value of the business.

Level 3 of the Market Value System dramatically increases professional productivity and motivation.

Level 3 of the Market Value System simplifies future planning activities.

Like the underwater part of an iceberg, Knowledge Blocks are hidden from view.
